

Our offer in terms of calculation, structural analysis & design

Concrete structures

- Commercial, residential, industry, agricultural and infrastructure structures (buildings, halls, reservoirs, retaining walls, foundations)
- Reinforced and prestress concrete structures made in precast technology or cast-in place
- Design covering all phases of the construction (building permit design, execution design) made using technology 3D BIM
- Calculation of all types of concrete structures in accordance with EUROCODE and ACI standards
- Drawing documentation and calculation reports in English, German or Polish

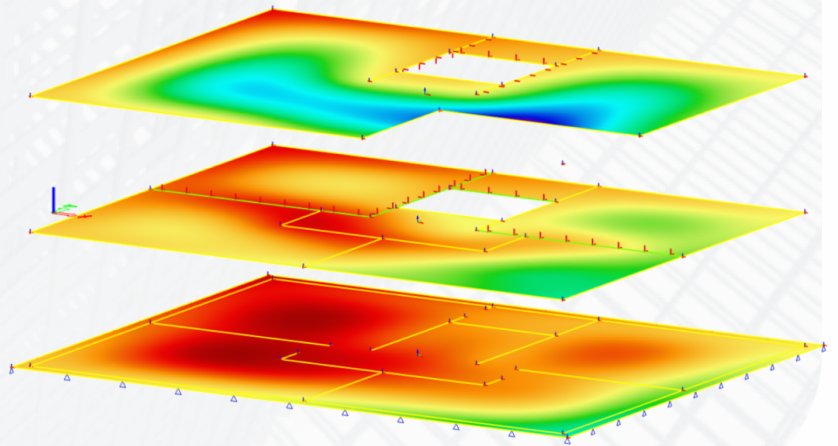

Steel structures

- Commercial, industry and agricultural structures (production and storage buildings, cable and pipe bridges, superstructures)
- Design covering all phases of the construction (building permit design, execution design, workshop design) made using technology 3D BIM
- Solutions optimizing the structure (openwork profiles, corrugated web profiles, cold formed profiles)
- Calculation of all types of steel structures in accordance with EUROCODE and ACI standards
- Drawing documentation and calculation reports in English, German or Polish

Structural analysis

- Geotechnical analysis
- Detailed FEM analysis of atypical tasks
- Dynamic and seismic analysis
